Subject: Heads Up: Call from John Mays

John Mays called again. He became very insistent that we provide Powertech, at least verbally, some idea on timing of draft permit issuance. He believes the current NRC hearings on the remaining contentions have no bearing on their ability to move forward with their operations as authorized by NRC'S approval of their license. In his mind, the only hold up is our permitting process.

He told me he would be calling you tomorrow to discuss this further. He also said he may request a meeting with Shaun to express his concerns, etc.
